Address Data Solutions

Migrate to the cloud with confidence.

Our cloud-based Address Data Solutions on the Aligned Assets platform are easy to use, secure and accessible from anywhere with an internet connection.

Cloud-based solutions for optimum efficiency

Our Aligned Assets platform delivers cloud-based solutions for creating and managing properties and streets to the British Standard BS7666. Using the latest technology and standards, our address management, matching and cleansing, and rapid address search solutions drive efficiency and optimise accuracy.

Why migrate to the cloud?

Universal accessibility with maximum security

Our cloud-based solutions can be accessed from anywhere with an internet connection and are underpinned by our new Symphony Security module, ensuring safe and secure access.

Optimised user experience

Designed through ethnographic research and contextual interviews, our cloud-based solutions are as user-friendly and efficient as possible. The comprehensive range of wizards and templates makes data entry and reporting easy and efficient, saving time and reducing manual errors.

Automated processes

Our enhanced automation capabilities reduce data entry and simplify processes. Configurable workflows embedded with automated tasks enable organisations to tailor their solution to suit their specific needs, whilst facilitating faster processing times.

Efficiencies via APIs

The web services allow other systems to utilise the central address management solution's functionality directly, enabling real-time updates in the BS7666 format, saving time and reducing manual error. Our systems can also push and pull information to and from a variety of external third-party sources.

Secure and scalable

Our secure cloud platform supports collaboration and can be applied to a single organisation or scaled to accommodate complex shared services, such as local government unitaries or emergency services partnerships, enabling data segregation as required.

Lower cost of ownership

Our cloud-based solutions remove the requirement for costly IT infrastructure on premise, saving on extensive hardware, energy and maintenance costs. Fully supported, maintained and updated by Idox, your IT resources can be reallocated to other vital project work.

Secure cloud solutions

With digital transformation at the heart of both public and private sector strategy, we are here to help you step into the cloud. Working with large and complex organisations for over 30 years, we have developed a deep knowledge and understanding of how they work. This experience, combined with the consistent feedback we proactively seek out on your specific requirements, enables us to develop the solutions you need to enable optimum efficiency in your work. We know budgets are tight so by streamlining functionality and workflows, we can boost productivity while saving you money.

“Now we are fully in the cloud, and our IT infrastructure costs and maintenance overheads have been significantly reduced, we can make our budgets work harder to deliver improved services for our residents.”

Rakesh Kumar

Spatial Services Manager, Cherwell District Council
